ENGAGING INNOVATIVE KNOWLEDGE THROUGH APPLIED QUALITATIVE RESEARCH

MCAST 2nd ANNUAL CONFERENCE IN QUALITATIVE RESEARCH METHODS

MCAST

This study **aims** to shed light on any misconceptions or old perceptions which may not be in line with facts and reveal the benefits with regards to each learning style.

The **context** of this research was to primarily focus on the local perceptions and impacts of educational styles within the local ICT sector.

- What is the **student opinion** before and after taking each educational path?
- What is the perception of **ICT organisations** on the two different educational styles?
- How does the difference in impact of the educational styles **ware** off?
- Is there a correlation between an educational path and job or **entrepreneurial opportunities**?

MCAST

Researcher

Profiles of 100 LinkedIn UoM graduates
Profiles of 100 LinkedIn MCAST graduates

All with current ICT jobs

Data was extensively cleaned, coded and analysed in different ways, MaxQDA & FAM.D.

Initial themes were extracted in order to further analyse in subsequent viewpoints

General

Two independent quantitative surveys were conducted with different cohorts.

Both surveys were sectioned into 4 different sections:

- Demographic information and details about Participants' education background
- Participants' employment background
- Reflection on their experiences and perceptions

Professional

One-to-one qualitative interviews were conducted as the third viewpoint of data collection.

These interviews offer flexibility in research as questions can be adapted based on the participant's responses.

All interview participants were ICT professionals from diverse backgrounds and experiences.

The interviews aimed to gain insights and a deeper understanding of participants' perspectives on ICT-related topics.

Public's Perspective

Survey Targeting Current ICT Students

Majority of students experienced a traditional learning approach during their bachelor's degree.

70% of respondents have also experienced vocational learning.

Participants highly value vocational learning and believe it is beneficial to combine practical skills with theoretical principles.

Vocational learning helps individuals to be more prepared for their first position.

Survey Targeting Current ICT Professionals

Majority of participants strongly agreed that gaining practical experience while pursuing their degree was beneficial.

They recognized the significance of bridging the gap between theoretical knowledge gained in the classroom and real-world application.

Participants emphasized the need to apply theoretical knowledge in practical settings to enhance their understanding and skills.

Answering the Research Questions & Hypothesis

- Students value practical experience and recognize the benefits of gaining practice while pursuing their first ICT degree.
- Both traditional and vocational education paths are perceived positively, with UoM graduates showing a strong foundation for career growth and MCAST graduates achieving career progression and venturing into entrepreneurship.
- Organisations value candidates with a vocational background for their practical skills and industry knowledge, while candidates from a traditional educational background tend to grasp new approaches and engage in research more efficiently.
- The initial impact of the educational path may diminish over time as experience and career progression become more influential factors.

ENGAGING INNOVATIVE KNOWLEDGE THROUGH APPLIED QUALITATIVE RESEARCH

MCAST 2nd ANNUAL CONFERENCE IN QUALITATIVE RESEARCH METHODS

MCAST

Conclusions

Students value practical experience alongside their ICT degree.

Both educational paths are both positively perceived. Graduates have a strong foundation for career growth & entrepreneurship.

Employers value vocational education graduates for practical skills and industry knowledge.

Traditional education graduates excel in grasping new approaches and research.

Experience and career progression become more influential over time.
